Idetix Software Systems Announces Release of Idetix eScore Tools™ v1.0

Auburn Hills, MI... Idetix Software Systems, www.idetix.com, has released Idetix eScore Tools™ v1.0, announced George Cameron, President and CEO of Idetix.

“Idetix eScore Tools™ provide database administrators, web masters and other IT professionals with a simple, tag-based scripting language that facilitates ‘Net-Centric’ communications, information sharing and collaboration via web-based applications,” said Cameron. “Idetix eScore Tools™ directly address the excessive costs of both integrating enterprise data stored in disparate databases and making this information accessible via the Internet, thereby reducing the cost, complexity and time to deliver these solutions by an order of magnitude.”

“Originally developed to meet Department of Homeland Security and National Guard needs, we are now making Idetix eScore Tools™ available for the healthcare and military markets and other government, nonprofit and commercial applications,” Cameron stated.

Designed as a commercial off-the-shelf software (COTS), Idetix eScore Tools™ enable seamless information access, integration and manipulation by web pages across a full spectrum of Internet accessible information sources, including 10 different types of database servers (Oracle, SQL Server, DB2, Sybase, Informix, InterBase, SQLBase, MySQL, PostgreSQL and ODBC) and other types of web-based information objects such as images, email, audio, video, and biometric signatures. The tools have been used to efficiently merge information from as many as 3,500 simultaneous databases. Multiple, disparate databases can communicate in near real time, and the data from different databases can be easily merged and displayed or written to another database, building the foundation for a complete “Net-Centric Enterprise Service” model.

Idetix eScore™ Tools run swiftly, efficiently and securely by using the original OEM clients and native APIs of the respective DBMS solutions. No additional software installation is required on database servers. Existing Idetix scripts support essential communication and security requirements for Compression, Data Base Integration, Encryption, LDAP, Authentication, File Attachment, TCP/IP and extensive support for Custom API's as required for secret, top secret and classified information.

For more information about Idetix Software Systems or Revize, contact George Cameron at Idetix Software Systems, 2399 East Walton Blvd., Auburn Hills, MI 48326-1955. Phone: 248-373-9550, ext 211. Web Site: www.idetix.com .
